Profile

Business Systems and Automation Engineer with hands-on software engineering and applied AI experience. Skilled in analyzing operational workflows, eliciting stakeholder requirements, and translating business needs into software, API integrations, and AI-assisted automation. Experienced in Jira-based planning, cross-functional delivery, Python and TypeScript development, data processing, and LLM integration, supporting solutions from discovery through validation, rollout, and continuous improvement.

Education

Universidad Latina de Panamá, Bachelor's in Computer Systems Engineering — Jan. 2021 – June 2026

- First place at the Engineering Fair — January 2024
- **Capstone focus:** Programming, Artificial Intelligence, Computer Architecture

Experience

AI Engineer, PX Inc. — September 2026 – Present

Drive the analysis and delivery of business-facing software, workflow automation, and integration solutions, bridging operational stakeholders and engineering.

- Analyze operational workflows and gather stakeholder requirements to identify opportunities for process improvement, automation, and internal tools.
- Translate business needs into actionable Jira work items, clarifying requirements, scope, priorities, and acceptance criteria; coordinate planning and implementation with the engineering team.
- Iterate on features with stakeholders, incorporate feedback, validate business requirements, and support solution rollout, documentation, maintenance, and continuous improvement.
- Contributed to the delivery of a publisher onboarding portal that streamlined information exchange and coordination between publishers and internal departments, reducing handoffs and onboarding friction while shortening onboarding turnaround time.
- Implemented a personal AI-assisted development workflow connecting Jira backlog context with an LLM, reusable skills, and GitHub to streamline task analysis, implementation planning, and execution, improving personal development productivity.

Integration Specialist, PX Inc. — June 2025 – September 2026

Integrated publisher and partner APIs into a performance marketing platform, developed automations and data-processing tools, and maintained synchronization across business systems.

- Automated dynamic account creation with Pipedream, reducing approximately 6 hours of manual work per week.
- Completed more than 85% of publisher integrations in under 10 days on average.
- Reduced redundancy-related errors by more than 75% by centralizing interdepartmental data into a single source of truth.
- Developed Python and Node.js scripts, ETL processes, and pandas-based reports to streamline operational workflows and data handling.
- Built and maintained integrations and automations connecting business platforms, alongside internal tools and publisher-facing resources.

Testing Assistant, Smartmatic — Apr. 2025 – May 2025

Performed quality assurance testing for electoral systems and software solutions, executing functional and non-functional test cases and collaborating with QA and development teams.

- Achieved 100% completion of assigned test cases on schedule.
- Partially automated machine provisioning, reducing setup time per unit by 15%.
- Identified, reproduced and reported a critical bug that improved later releases.

Languages

- Spanish – Native
- English – C2 (Proficient)

Certifications

IBM via Coursera, Generative AI and LLMs: Architecture and Data Preparation — August 2025

Michigan State University via Coursera, Web Applications for Everybody; Python for Everybody — September 2020

Duke University via Coursera, Java Programming: Solving Problems with Software — September 2020

UNAM via Coursera, Android Fundamentals; Java Programming for Mobile Apps — August 2020

Johns Hopkins University & Duke University via Coursera, HTML, CSS & JavaScript; Interactivity with JavaScript; Programming Foundations with JavaScript, HTML and CSS — June 2020

Featured Projects

LoanTrack - Loan Management System
Built a full-stack loan management platform with a FastAPI REST backend, React and TypeScript frontend, and PostgreSQL database. Implemented JWT authentication, role-based access, payment and interest ledger functionality, CSV imports, file attachments, and webhook integrations. Containerized the application and implemented CI/CD for automated testing, staging deployment, and approval-gated production promotion.

- Tools used: Python, FastAPI, SQLAlchemy, Alembic, PostgreSQL, React, TypeScript, Docker, GitHub Actions, Render

AI-Assisted Financial Analysis Workflow
Designed a multi-step Windmill workflow that retrieves bank-statement PDFs from Gmail, extracts account balances and transactions from local bank statements using Python and pdfplumber, and upserts normalized records into Google Sheets with duplicate-processing safeguards. Integrates a Groq-hosted LLM to generate monthly financial insights and delivers formatted reports through Gmail.

- Tools used: Windmill, Python, TypeScript/Bun, pdfplumber, Gmail API, Google Sheets API, Groq API (GPT-OSS)

Technologies & Skills

Business Analysis & Delivery: Business process analysis, requirements elicitation, stakeholder engagement, solution scoping, Jira backlog management, acceptance criteria, iterative delivery, cross-functional coordination, technical documentation.

AI, Automation & Data: LLM integration, AI-assisted workflows, prompt engineering, workflow automation, REST API integration, ETL, data parsing and validation, Python, pandas, NumPy, pdfplumber, Windmill, Pipedream, Groq API.

Software Development: TypeScript, JavaScript, Node.js, Python, Java, FastAPI, Spring Boot, React, SQL, PostgreSQL, MS SQL Server, SQLAlchemy, Alembic, JPA/Hibernate, JWT; C, C++, C#, PHP, Dart.

DevOps, Platforms & QA: Git, GitHub Actions, Docker, CI/CD, Render, Postman, Pytest, Vitest, functional and API testing, Jira, HubSpot, Monday.com, Softr, WordPress, Linux (Rocky Linux/Ubuntu), Windows.
